POWERING MAXIMUM FLEXIBILITY

The MRI Software suite is the most flexible in the industry. Every module comes with a vast library of adjustable graphs, forms, and reports, built right in to meet nearly every conceivable need. Of course, your organization has specialized needs, business goals, and philosophies. That's why the Application ToolKit powers your unique competitive strategies. Easy-to-use tailoring tools ensure your solution is as versatile as your imagination. And you don't have to be a programming expert to use them. Moreover, all of your modifications are saved and protected. After an upgrade, your modifications will still be in place.
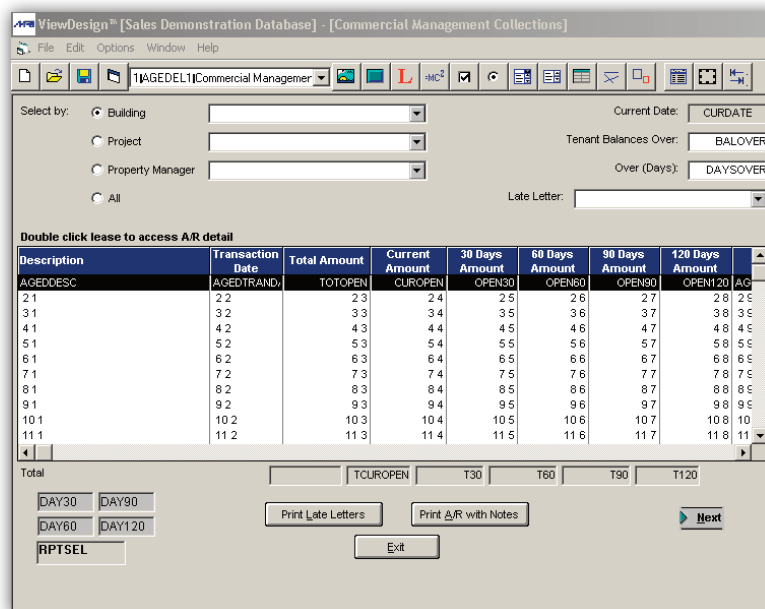

ViewDesign

Design – Quickly re-design view appearance to fit the way you do business.

Control – You control the content of each view, as well as how information is presented and assembled. Use standard object styles to ensure the appearance of your modified views remains consistent with system views.

Add – Create new views and rearrange default views to accommodate new fields or files added to your system.

Insert – Insert fields in any location to match the flow of data entry and speed up operations.

DatabaseDesign

Transform – DatabaseDesign gives you the power to transform table structure.

Create – Use DatabaseDesign to quickly create and modify new tables. Add fields and indexes to existing tables and establish new table relationships.

Change – Change the order of fields by simply dragging the field to a new position. Modify the size and characteristics of default fields.

Define – You determine how the system will display, validate, and sort information during data entry. You define the validation rules, default values, acceptable ranges, and references.

MenuDesign

Maximize – Maximize productivity and efficiency with menus designed around the way you work.

Configure – Modify the menus users see as they enter and navigate through the system.

Program – Program each menu button to execute any MRI or non-MRI program you choose.

Protect – Flexibly restrict user access to entire applications or to specific companies, properties, menu items, files, data fields, and reports.

Easy Tailoring

Short-Cut Buttons – Special short-cut buttons speed up and simplify the tailoring process.

Graphics Tools – It's easy to add new objects to a form, such as a company logo. Quickly insert and modify labels, lines, shapes, images, and buttons.

Color Palette – Select from a palette of screen colors to highlight field names, screens, and data, emphasizing areas that are important to your business.
