

An open and connected ecosystem of APIs to drive your business's success

Solution Overview

The success of your real estate organization depends on technology meeting the unique needs of your business. At MRI, we build solutions that give you the freedom to run your business your way. That's why we created the MRI Information Exchange (MIX), a revolutionary community to help you find custom solutions that work for your organization.

MIX is an ecosystem of secure APIs built by MRI and our Partners which offer you complete control over the information exchange between MRI and third-party applications. For home-grown and proprietary systems, MIX also provides a toolkit that helps you build your own custom APIs. Leverage MIX's secure API community to create a custom and integrated technology solution that meets your business's strategy.

1,000+
unique APIs
created in the MIX
environment

Business Benefits

- Ensure data security and integrity with partner-built APIs, vetted by MRI engineers
- Easily connect to your custom in-house solutions with industry-standard protocols and conventions
- Focus on your operations and performance with infrastructures to handle large datasets
