

# Easily tailor the solution to enhance current business processes and performance

## Solution Overview

Every business is unique. There is no such thing as a one-size-fits-all solution. Since our inception over 45 years ago, we have maintained an unwavering commitment to providing our clients with flexibility and choice. The Flexibility Toolkit empowers our clients to easily tailor the solution to further enhance the way they do business, not change it. This innovative solution allows users to easily customize web pages, views and menus as well as providing the ability to configure reports and workflows. This type of flexibility increases internal adoption, adds additional efficiency, and enables our clients to present information in the way their key stakeholders need to see it.

## Key Features

- Easily modify web pages, views, and menus
- Configure custom workflows
- Control how information is presented and assembled
- Create custom reports from scratch or modify an existing, standard report

**“It’s very easy for us to come in, customize web pages, configure the solution to meet our needs, and really deliver value to our business.”**

Tom Hess, Director of Enterprise Applications  
Phillips Edison & Co.

## Business Benefits

- Maximize performance by easily tailoring the solution to align with current business processes
- Empower your end users to perform at the highest level with intuitive, configurable workflows
- Satisfy key stakeholders by presenting information in the way they want to see it, when they want to see it
- Optimize your MRI system to elevate your business and further differentiate from the competition
